

BSK10 LIPOPRO

REDUCING LIPOLITIC SOLUTION

WHAT IS IT?

LIPOCUT combats localised adiposity by helping to reduce the number of fat cells in the target area, by stimulating lipid breakdown, mobilisation and elimination. It restores firmness to the skin, improving its tone and texture.

Potent antioxidants combat the toxic impact of adipose tissue lipids and oedema. Combining proven lipolytic and skin firming ingredients including:

Phosphatidylcholine and Sodium Deoxycholate stimulate lipid breakdown, mobilisation and elimination. They help to activate lipase which reduces the synthesis of triglycerides whilst increasing fatty acid solubility.

Organic Silanol stimulates fibroblasts and promotes the biosynthesis of collagen and elastin. Caffeine stimulates and intervenes in the lipolytic process, provoking lipase and encouraging the mobilisation and metabolism of free fatty acids.

Natural Extracts (Horsetail, Ausculus Hippocastanum, Rutin and Melilotus) stimulate lipolysis, improving lymphatic drainage, protecting capillaries and blood vessels, and accelerating the production of collagen with a skin firming action. It is a professional use, sterile, cosmeceutical solution.

PRESENTATION

Vials 10ml / 0.35 Fl. Oz. | 1 Box of 5 units

USE

Targeted body contouring with skin toning.

INGREDIENTS

Phosphatidylcholine, Sodium Deoxycholate, Organic Silanol, Caffeine, Natural Extracts (Horsetail, Ausculus Hippocastanum, Rutin and Melilotus)

BENEFITS

Stimulates lipolysis, improving lymphatic drainage, protecting capillaries and blood vessels and accelerating the production of collagen with a skin firming action.

APPLICATION METHODS

Bioskin Dermolife Cosmetic stays up to date with the latest market trends, techniques and procedures applied for mesotherapy and virtual mesotherapy. In terms of virtual mesotherapy, there are three common application methods:

1. Meso Pen
2. Dermal Roller
3. No Needle Mesotherapy/Transdermal Delivery System. This can include varied technologies including electroporation, iontophoresis, ultrasound, thermotherapy, galvanic, radiofrequency, etc.

It is not imperative apply Bioskin solutions with the aforementioned techniques as they can be applied with manual massage.

If using with injection mesotherapy, please check the applicable regulations in your country.

IMPORTANT CONSIDERATIONS FOR SOLUTIONS

When performing treatments which cause small wounds in the skin surface, as with Meso Pens or Dermal Needling, it is important that the products used are sterile and aseptic, to avoid the risk of infection.

Additionally, the solution must not contain additives, preservatives or perfumes which can present higher risk of allergies due to the fact that they penetrate to a greater depth than with topical use.

Bioskin professional solutions are:

Meticulously
selected pure active
ingredients

Manufactured to
pharmaceutical
standard

Sterile, with no
preservatives or
additives

Safe and highly
tolerant

Developed
from traditional
mesotherapy

High
concentrations

Of proven
effectiveness

Isotonic and at the
correct pH

INGREDIENT QUANTITIES

The amount of solution required will depend on the size of the area being treated, which can differ greatly between areas and also clients, who have individual body shapes and size.

It is common to use between 2-5ml when treating the face.

BENEFITS OF MESO PENS AND DERMAL ROLLERS

Both Meso Pens and Dermal Rollers open cutaneous micro channels creating micro trauma which causes an innate response by the body which offers the following benefits:

- Stimulates the production of collagen and elastin
- Gives a firming and rejuvenating effect
- Diminishes the appearance of scars and stretch marks
- Reduces fine lines and wrinkles
- Reduces pore size
- Stimulates hair growth and prevents hair loss
- Enhances the penetration of aesthetic solutions

TRANSDERMAL DELIVERY SYSTEMS

Along with Meso Pens and Dermal Rollers, Bioskin solutions can perfectly combine with numerous transdermal delivery systems available such as no needle mesotherapy.

Each solution will induce differing effects depending on its specific actions.

For example, the application of HYALURONIC ACID 3% (sterile vial) during transdermal delivery will:

- Antiwrinkle effect: Hyaluronic acid retains water molecules in the tissue which reduces the appearance of the fine lines and wrinkles.
- Rejuvenating effect: it enhances the recovery of cellular communication and normal skin functioning and accelerates the production of collagen and elastin.
- Sealing action: it creates a sealing effect to the skin which reduces moisture loss and increases skin hydration, protecting the skin from environmental damage.

BSK10 LIPOPRO

REDUCING LIPOLITIC SOLUTION

STEP BY STEP

1

SKIN PREPARATION

- Cleanse the skin of the treatment area
- Exfoliate dead skin cells to enhance skin permeability, preferably with a soft mechanical peel/abrasion
- Cleanse the area again and disinfect the skin

2

ANALYSIS & MIXTURE

Analyse the patients skin according to their treatment objectives and select the appropriate solution.

3

APPLY INGREDIENT SOLUTIONS

Drop the solution with a dropper or a syringe directly onto the skin of the Meso Pen/Dermal Roller treatment area, see diagrams. If your No Needle Mesotherapy/Transdermal Delivery System uses a conductive gel, mix the solution with it.

4

TREATMENT WITH MESO PENS

- A · Ensure the Pen is plugged in or charged and insert a sterile needle head into its tip
- B · Configure the Meso Pen speed and depth settings in accordance with the area and the condition being treated
- C · Gently hold the skin of the treatment area to make it taught, whilst, with your Pen:

Make small circles
from left to right

Work from top
to bottom

Work diagonally

Exert gentle but constant pressure with the Pen
Continue to drop the solution on the treatment area as you proceed

TREATMENT WITH DERMAL ROLLERS

- A · Choose the appropriate Dermal Roller needle length in accordance with the area and the condition being treated
- B · Ensure the Meso Roller is disinfected and sterile
Gently hold the skin of the treatment area to make it taught, whilst, with your
- C · Roller:

Roll from left to right

Roll from top
to bottom

Roll diagonally

Exert gentle but constant pressure with the Roller
Continue to drop solution on the treatment area as you proceed

TREATMENT WITH NO NEEDLE MESOTHERAPY / TRANSDERMAL DELIVERY SYSTEMS

Follow the directions given by your device manufacturer.
With some systems, the solution is mixed with a conductive gel, with others, dropped onto the skin during treatment.

5

POST TREATMENT PROCEDURE & RECOMMENDATIONS

It can be beneficial to not wash the skin after treatment unless using a conductive gel.
It can be beneficial to avoid applying cosmetics, other than sun block, and also to avoid prolonged sun exposure or up to seven days.
Keep good clinical records of patient and treatment details and observations, including solutions used.

WARNINGS

- Always work to the applicable law for your country
- Keep adequate clinical records and signed patient consent prior to starting the treatment
- Ensure your device remains sterile prior to treatment
- Always examine the patient's skin prior to treatment and do not perform if the skin is injured, infected or inflamed
- Ensure the ingredient solution is correctly sealed and undamaged, and within its use by date
- The needles used with Meso Pen are used once only whilst Dermal Rollers are for individual patient use and should be disinfected before and after each treatment
- Do not exert excessive pressure on the skin with Meso Pens or Dermal Rollers
- Meso Pens and Dermal Rollers should not be applied to the lips and eyelids
- Advise the patient that inflammation and/or a burning/itching sensation are quite normal reactions during Meso Pen and Dermal Roller treatments
- Always follow the directions, contraindications and warnings recommended by the manufacturer of the device used
- If a patient develops any type of skin rash or allergic reaction to the treatment, discontinue the treatment immediately and contact Bioskin at info@bioskincosmetic.com
