

BSK74 MULTIVITAMIN SERUM WITH PROTEOGLYCAN

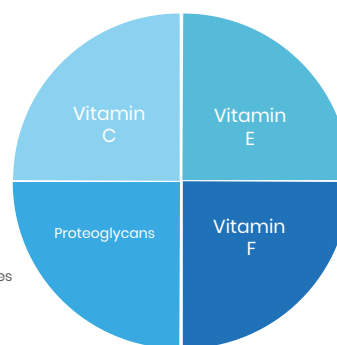

WHAT IS IT?

- The main components of the multivitamin serum are vitamins C, E and F, reinforced with the moisturizing action of proteoglycans. The synergy of these ingredients brings luminosity to the skin and improves its appearance.
- A multivitamin regenerating serum, non-dog-eating and with great penetrating power. As a vehicle for all these components, propylene glycol, one of the most effective excipients that allows the penetration of the active ingredients into the skin, has been incorporated into the formula.
- It has super hydrating, repairing and firming properties.
- It is indicated for mature and dull skin, with signs of fatigue or with irregularities of pigmentation or texture and for atopic skin with problems of dryness and eczema. Indicated for normal, dry and very dry skin.

• Anti-radical
• Pro-hydrating
• Depigmentation
• Prevents and promotes elasticity

• Firming
• It favors water retention and reduces its loss

• Regenerating
• Enhances the action of vitamin C
• Antioxidant

• Restores barrier function
• Reduces water loss
• Increases hydration and elasticity

PRESENTATION

- Serum 30ml
- Professional format: 30ml

USE

- Facial
- For normal and dry skin; dull skins

INGREDIENTS

- Vitamin C
- Vitamin E
- Vitamin F
- Proteoglycans

ACTION

- Antioxidant
- Anti-age
- Anti-radical
- Moisturizing
- Regenerator

BSK74 · MULTIVITAMIN SERUM WITH PROTEOGLYCAN

VITAMINIC STUDIES

Vitamins generally act by activating our vital systems, protecting cell membranes, reinforcing the resistance of the skin, acting on intercellular exchanges and delaying cellular aging.

VITAMIN C

Vitamin C is essential in the synthesis of collagen: their absence causes the formation of defective collagen which is reflected in a brittle and inelastic skin. In cosmetics products, vitamin C brings more clarity to the skin and helps eliminate hyperpigmentation, why is included in despigmentating protocols.

- **Anti-radical** thanks to its antioxidant action, neutralizes the harmful effects of free radicals, mainly responsible for skin aging.
- **Pro-moisturizing action** by regenerating Vitamin E from the skin degraded by free radicals, allowing it to fully develop its moisturizing, antioxidant and skin repairing activity.
- **Action on the elasticity of the skin** by delaying the loss of elasticity due to the oxidation of lipids, which in turn favors the deterioration of the elastic fibers of the skin.

VITAMIN E

Vitamin E has great effectiveness in terms of skin regeneration, so products with high amount of this vitamin are recommended after physical or chemical peeling. It also acts as a synergist in the action of vitamin C and fighting free radicals, has a high antioxidant activity.

VITAMIN F

Vitamin F is not exactly a vitamin, but a set of essential unsaturated fatty acids. This "vitamin" is recommended for treating problems of dry skin, eczema and scarring, so you could say that this is the remedial component.

PROTEOGLYCANS

Proteoglycans are large complex molecules with the ability to repair skin cells and enhance the metabolism of connective tissue, this is the Firming component. Furthermore promote water retention in the skin causing the skin does not lose moisture easily.

BSK74 · MULTIVITAMIN SERUM WITH PROTEOGLYCAN

USE

It is recommended to apply morning and night, alone or with cream treatment.

OUR PRODUCTS

In our lab we use only simple, effective and recyclable packaging with a clean, functional design and focus our efforts and resources on what is important for your skin: the quality of the ingredients and manufacturing processes.
