

BSK14 TRANEX PRO DEPIGMENTING SOLUTION

WHAT IS IT?

Sterile cosmeceutical solution with tranexamic acid, kojic acid, ascorbic acid (vitamin C), nicotinamide, rutine and high, medium and low molecular weight hyaluronic acid, with moisturizing and depigmenting action.

The formulation of BSK 14 has been reinforced with Kojic acid and vitamin C for greater antioxidant action, reducing Hyperpigmentation significantly.

Formulated with hyaluronic acid, with a moisturizing activity, an increase in elasticity and an activation of collagen and elastin production due to its low molecular weight fraction.

With vitamins that reinforce and restructure the dermal layer have been used for rapid recovery after treatment.

To prolong the effects of the treatment, it is recommended to use Serum BSK76 and Depigmenting Cream BSK70.

PRESENTATION

Vials 5ml / 0.175 Fl. Oz. | 1 Box of 5 uds

USE

Cosmetic product. Topical use.
Facial and hands product.

INGREDIENTS

Aqua	Kojic Acid
Tranexamic Acid	Niacinamide
Ascorbic Acid	Glutathione
Sodium Hyaluronate	Troloxerutin

PRECAUTIONS

- Preserve between 5°C y 25°C
- Keep out of children's reach

DEPIGMENTING SOLUTION

HOW TO USE

How to apply?

Apply on the area to be treated, giving a light massage until product complete absorption.

Suitable for cosmetic treatments and virtual mesotherapy.

External use. Topical use.

Facial and hands product

Professional Treatment

1. Using the transdermal therapy technique chosen by the professional, apply 3-5 ml of the solution (BSK14)
2. Repeat the application after three weeks
3. For effective treatment between the first and second professional sessions, tranex-pro BSK76, BSK70 and sunscreen products should be applied daily at home
4. Repeat as required to achieve treatment objectives every 6-12 months

Home Treatment

1. Clean your face and neck in the morning and at night
2. Apply the Face Tonic
3. After cleaning your face apply the Serum Tranexpro on the area to be treated, giving a light massage until product complete absorption
4. After the serum, apply Cromabright cream giving a light massage until product complete absorption
5. In the morning, it's recommended, apply Solar protector

STUDIES

There are currently different studies that support the efficacy of topical use of 5% tranexamic acid to reduce hyperpigmentation due to long sun exposure, hormonal changes, what is commonly known as melasma or ect.

Studies have been done comparing the efficacy of this active against hydroquinone, a product that cannot be used in cosmetic products.
