

BSK76 TRANEX PRO SERUM INTENSIVE DEPIGMENTING SERUM

WHAT IS IT?

Professional depigmenting serum treatment that works with BSK14 TRANEXPRO. Formulated with biotechnological depigmenting actives and reinforced with Tranexamic Acid, to act on the inhibition of tyrosinase activity, helping to eliminate the stain and prevent its possible subsequent appearance.

The main components of this new multivitamin serum are vitamin C, E and F, reinforced with the moisturizing action of proteoglycans. It is indicated for dull skin, with signs of fatigue or with irregularities in pigmentation or texture.

Its action is depigmenting, unifies skin tone and is anti-aging. It also has antioxidant components, which are chemical compounds that the human body uses to eliminate free radicals. These are very reactive chemical substances that introduce oxygen into the cells and produce oxidation of their different parts, alterations in the DNA and various changes that accelerate the aging of the body.

PRESENTATION

- Serum 30ml
- Professional Format: 30ml
