

BSK701 HYDRA KIT HOME CARE KIT

ENG

DESCRIPTION

BSK701 HYDRA KIT is part of our new home treatments line of products. These kits are specifically designed to use after a professional treatment, so the patient can follow the treatment done professionally at home. To prolong duration and to accentuate treatment results.

BSK701 HYDRA KIT is an intensive moisturizing treatment, it ensures that the skin's water levels are balanced and the protective barrier appears stronger and more flexible. Provides extra protection against external agents such as the weather or pollution. The result is a balanced, strong and supple skin.

PRESENTATION

- BSK89 Glycolic Gel 20% - 50 ml / 1.691 Fl.Oz.
- BSK74 Multivitamin Serum - 30 ml / 1.014 Fl. Oz.
- BSK71 C+E Vitamin Gel Cream - 50 ml / 1.691 Fl. Oz.

USE

- Facial
- For all skin types

INGREDIENTS

- Vitamin C
- Vitamin E
- Vitamin F
- Proteoglycans

ACTION

- Antioxidant
- Anti-age
- Anti-radical
- Moisturizing
- Regenerator

BSK89 GLYCOLIC GEL 20% GLYCOLIC PEELING

BSK89 GLYCOLIC GEL 20%

Alpha Hydroxy Acids (AHA) products are largely used to fight ageing for their moisturizing effect and for the stimulation of collagen and elastin production. Lactic and Glycolic acid are the most employed because they help the scraping-off of dead cells and give a healthier and younger look to our skin. Glycolic acid is the alpha hydroxy acid with the smallest molecule, so that it is very efficient for cosmetic treatments.

ACTION

The mechanisms that allow AHA to increase skin moisturizing and wrinkles reduction are the following:

- They scrape-off superficial dead cells (corneocytes) through their micropeeling action on the corneous layer of the skin.
- They increase epidermis hydration level thanks to their moistening properties
- They stimulate the biosynthesis of glycosaminoglycans and other intracellular substances that retain water in the skin
- They stimulate new collagen production in the papillary dermis and enhance the elastic fibres in the reticular dermis.

BSK74 MULTIVITAMIN SERUM BRIGHTENING SERUM

BSK74 MULTIVITAMIN SERUM

- The main components of the multivitamin serum are vitamins C, E and F, reinforced with the moisturizing action of proteoglycans. The synergy of these ingredients brings luminosity to the skin and improves its appearance.
- A multivitamin regenerating serum, non-dog-eating and with great penetrating power. As a vehicle for all these components, propylene glycol, one of the most effective excipients that allows the penetration of the active ingredients into the skin, has been incorporated into the formula.
- It has super hydrating, repairing and firming properties.
- It is indicated for mature and dull skin, with signs of fatigue or with irregularities of pigmentation or texture and for atopic skin with problems of dryness and eczema. Indicated for normal, dry and very dry skin.

• Anti-radical
• Pro-hydrating
• Depigmentation
• Prevents and promotes elasticity

• Firming
• It favors water retention and reduces its loss

• Regenerating
• Enhances the action of vitamin C
• Antioxidant

• Restores barrier function
• Reduces water loss
• Increases hydration and elasticity

BSK71 C+E VITAMIN GEL CREAM ANTIAGE CREAM

BSK71 C+E VITAMIN GEL CREAM

C+E VITAMIN GEL CREAM is a product formulated based on Vitamin C (in the form of a stabilized natural extract) and Vitamin E incorporated into a new base excipient called cremagel that is characterized by its non-greasy texture. It contains large amounts of natural Vitamin C together with the essential oils and pectins typical of orange and which constitute a true natural protective capsule of vitamin C against oxidation and bacterial contamination. Likewise, the extract contains other vitamins of the orange: vitamins A, B1, B2, B5, B6, H and PP, as well as the amino acids and sugars of the pulp.

Vitamin C is a very labile active ingredient that, to maintain its effectiveness, must preserve its properties in the cosmetic product that is incorporated. For this reason, in our laboratory we have selected an extract from Calabrian blond oranges (*Citrus aurantium*), an orange particularly rich in Vitamin C that is collected at full maturity between the months of December and April.

This gel cream brightens and unifies the tone as well as fighting the symptoms of skin damaged by sunlight, stress and the passage of time. The gel cream is not greasy and is perfectly absorbed leaving a feeling of freshness and hydration on the skin. For an anti-aging treatment, the Gel Cream with Vitamin C + E can be combined with our Multivitamin Serum with Proteoglycans, to enhance its results.

BSK701 HYDRA KIT HOME CARE KIT

HOW TO APPLY

1. BSK89 Glycolic Gel 20%:

Apply BSK89 forming a 3mm layer on face, neck and neckline. Leave for 20 minutes. Remove excess product with a damp gauze. Night use.

2. BSK74 Multivitamin Serum:

Using your fingertips, pat serum onto skin.

Use more than the standard pea-sized amount to ensure the entire zone gets coverage. Wait at least 15 minutes and let the formula absorb on its own. Day use.

3. BSK71 C+E Vitamin Gel Cream:

Squeeze out a pea-sized amount of cream onto the back of your hand. Dab the cream in small dots on face, neck and neckline. Gently massage it into your skin using small, upward, circular motions. Then wait for your skin to absorb the cream. Day use.

VITAMINIC STUDIES

Vitamins generally act by activating our vital systems, protecting cell membranes, reinforcing the resistance of the skin, acting on intercellular exchanges and delaying cellular aging.

VITAMIN C

Vitamin C is essential in the synthesis of collagen: their absence causes the formation of defective collagen which is reflected in a brittle and inelastic skin. In cosmetics products, vitamin C brings more clarity to the skin and helps eliminate hyperpigmentation, why is included in despigmentating protocols.

- **Anti-radical** thanks to its antioxidant action, neutralizes the harmful effects of free radicals, mainly responsible for skin aging.
- **Pro-moisturizing action** by regenerating Vitamin E from the skin degraded by free radicals, allowing it to fully develop its moisturizing, antioxidant and skin repairing activity.
- **Action on the elasticity of the skin** by delaying the loss of elasticity due to the oxidation of lipids, which in turn favors the deterioration of the elastic fibers of the skin.

VITAMIN E

Vitamin E has great effectiveness in terms of skin regeneration, so products with high amount of this vitamin are recommended after physical or chemical peeling. It also acts as a synergist in the action of vitamin C and fighting free radicals, has a high antioxidant activity.

VITAMIN F

Vitamin F is not exactly a vitamin, but a set of essential unsaturated fatty acids. This "vitamin" is recommended for treating problems of dry skin, eczema and scarring, so you could say that this is the remedial component.

PROTEOGLYCANS

Proteoglycans are large complex molecules with the ability to repair skin cells and enhance the metabolism of connective tissue, this is the Firming component. Furthermore promote water retention in the skin causing the skin does not lose moisture easily.

BSK701 HYDRA KIT HOME CARE KIT

PERFORMANCE VITAMINS C AND E

Product formulated based on Vitamin C (in the form of a stabilized natural extract) and Vitamin E incorporated into a new base excipient called cremagel that is characterized by its non-greasy texture. Vitamin E is especially known for its antioxidant power, which is increased considerably if used in conjunction with Vitamin C.

- 1 Free radicals reach the skin
- 2 y 3 Break the structure of DNA and collagen fibers
- 4 Vitamin E traps free radicals and Vitamin C removes them and releases regenerated molecules

-  Free radicals trapped by Vitamin E
-  Free radical molecules
-  Symbol of regenerated molecules without free radicals

OUR PRODUCTS

In our laboratory we only use simple, efficient and recyclable containers with a clean and functional design and we focus our efforts and costs on what is truly important to your skin: the quality of the ingredients and the manufacturing processes.
