

BSK704 ANTI-WRINKLE KIT HOME CARE KIT

ENG

DESCRIPTION

BSK704 ANTI-WRINKLE KIT is part of our new home treatments line of products. These kits are specifically designed to use after a professional treatment, so the patient can follow the treatment done professionally at home. To prolong duration and to accentuate treatment results.

BSK704 ANTI-WRINKLE KIT is a treatment to attenuate expression lines, fill in the deepest wrinkles, correct wrinkles of all kinds: corners of the lips, crow's feet, between the eye-brows... Increases facial luminosity and provides a smooth and natural appearance.

PRESENTATION

- BSK89 Glycolic Gel 20% - 50 ml / 1.691 Fl.Oz.
- BSK75 Anti-Wrinkle Concentrate Serum - 30 ml / 1.014 Fl. Oz.
- BSK72 Firming Cream - 50 ml / 1.691 Fl. Oz.

USE

- Facial
- For aged skin

INGREDIENTS

- Organic Sicilian
- Manuronic Acid (6%)
- DMAE (4%)
- Hyaluronicacid
- Matrikine (3%)

ACTION

- Antioxidant
- Anti-age
- Anti-radical
- Moisturizing
- Regenerator
- Firmness

BSK89 GLYCOLIC GEL 20% GLYCOLIC PEELING

BSK89 GLYCOLIC GEL 20%

Alpha Hydroxy Acids (AHA) products are largely used to fight ageing for their moisturizing effect and for the stimulation of collagen and elastin production. Lactic and Glycolic acid are the most employed because they help the scraping-off of dead cells and give a healthier and younger look to our skin. Glycolic acid is the alpha hydroxy acid with the smallest molecule, so that it is very efficient for cosmetic treatments.

ACTION

The mechanisms that allow AHA to increase skin moisturizing and wrinkles reduction are the following:

- They scrape-off superficial dead cells (corneocytes) through their micropeeling action on the corneous layer of the skin.
- They increase epidermis hydration level thanks to their moistening properties
- They stimulate the biosynthesis of glycosaminoglycans and other intracellular substances that retain water in the skin
- They stimulate new collagen production in the papillary dermis and enhance the elastic fibres in the reticular dermis.

BSK75 ANTI-WRINKLE CONCENTRATE SERUM

WITH ORGANIC SILICON HYALURONIC ACID AND DMAE

BSK75 ANTI-WRINKLE CONCENTRATE SERUM

Solution formulated to treat deep wrinkles, with anti-wrinkle actives that act on different levels of the skin. Intensive treatment with immediate and long-term action due to its complete formulation, it blurs fine lines, erases expression wrinkles and fills deeper wrinkles.

As you age, the processes in the skin slow down and the structure weakens. The reduction of substances that keep the skin firm and smooth begins (collagen and elastin). This is due to the combination of the effects of the body's internal aging processes and external factors (pollution, sun exposure ...). One of the first most noticeable signs of aging is wrinkles, which grow deeper over time.

Solution formulated to treat deep wrinkles, with anti-wrinkle active ingredients that act on different levels of the skin. Intensive treatment with immediate and long-term action due to its complete formulation, it blurs fine lines, erases expression lines and fills in deeper wrinkles.

BSK72 FIRMING CREAM

FIRMING CREAM WITH EPIDERMIC GROWTH FACTOR STIMULATORS (EGF)

BSK72 FIRMING CREAM

Dermcom & Gatuline Firmness Cream offers a complete treatment blending **Dermcomal 2% y Gatuline® Intense al 2%**

· **DermCom(2%)** is an extract of vegetable origin extracted from the part of the bulbs of the Saffron, universal symbol of rejuvenation and youth. The bulbs are parts of the plant that specialize in the storage of nutrients so they are an interesting source of active ingredients for the cosmetics. Dermcomrejuvenates the skin matrix thanks to its growth factor like activity, thus preserving and improving the biomechanical properties of the skin as well as its quality. The firmness of the skin is greatly improved, increasing the amount of collagen and elastin in the skin.

· **GATULINE® IN-TENSE (2%)** is a concentrated oily extract of plant origin, extracted from the African flower *Spilanthesacmella* that stimulates the natural firming capacity of the skin itself. Immediately increases the density and firmness of the skin and reduces the skin relief, from the first application the tightening and firming effect become visible.

GATULINE

- Quickly reorganizes collagen fibers and visibly smoothes the skin
- Attenuates wrinkles and loss of firmness
- Avoid the appearance of lines, grooves and folds in the skin
- Tensor effect

DERMCOM

- Stimulates collagen and elastin
- Renew resistance and firmness of the skin
- Reverse the aging process
- Rejuvenates skin texture
- Stimulates natural skin growth factors

BSK704 ANTI-WRINKLE KIT HOME CARE KIT

HOW TO APPLY

1. BSK89 Glycolic Gel 20%:

Apply BSK89 forming a 3mm layer on face, neck and neckline. Leave for 20 minutes. Remove excess product with a damp gauze. Night use.

2. BSK75 Anti-Wrinkle Concentrate Serum:

Using your fingertips, pat serum onto skin.

Use more than the standard pea-sized amount to ensure the entire zone gets coverage. Wait at least 15 minutes and let the formula absorb on its own. Day use.

3. BSK72 Firming Cream:

Squeeze out a pea-sized amount of cream onto the back of your hand. Dab the cream in small dots on face, neck and neckline. Gently massage it into your skin using small, upward, circular motions. Then wait for your skin to absorb the cream. Day use.

ACTIVE PRINCIPLES

Organic Sicilian
+
Manuronic Acid (6%)

- Anti-wrinkle and moisturizing properties
- It stimulates collagen production
- Free anti-radicals, anti-glycer
- Restructuring properties

Matrikine (3%)

- Reduces expression wrinkles
- Activate neosynthesis of the extracellular matrix reducing wrinkle

DMAE (4%)

- Anti-inflammatory and anti-aging properties
- Increases firmness and improves skin elasticity and luminosity
- Decreases the appearance of lines and wrinkles

Hyaluronic acid

- Immediate lifting effect
- Hydration barrier function

ORGANIC SILICON (ALGISIUM C®)

Organic Silicon is a structural component of connective tissue. It can be compared as the dermal cement that ensures optimal links between the elements of the extracellular matrix such as glycosaminoglycans and proteoglycans.

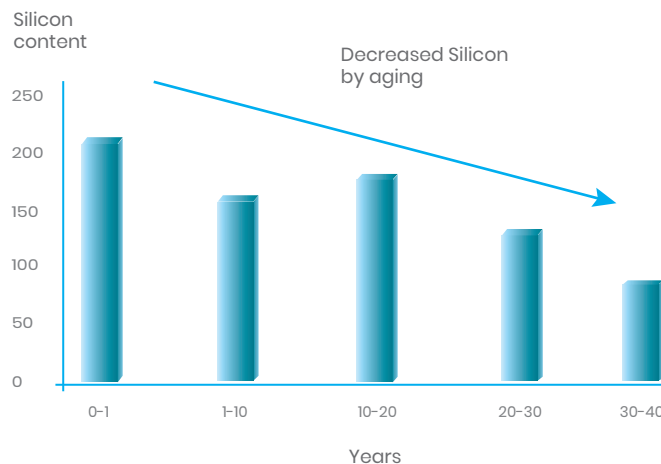

ORGANIC SILICON (ALGISIUM C®)

The restructuring activity of organic Silicon helps to maintain the mechanical properties of the skin such as elasticity, firmness but also maintains optimal cellular metabolic efficiency.

With aging, the organic Silicon content of the skin naturally decreases. Less elastic and unstructured, the skin tissue slowly collapses and the first fine wrinkles appear.

Focusing on skin rejuvenation, it is essential to compensate for the natural loss of organic Silicon. ALGISIUM C® is among the most effective sources of Silicon available. It can be assimilated by the skin directly, avoiding its deterioration due to the passage of time.

ALGISIUM C® represents a bioavailable source of organic Silicon, rich in hydroxyl functions. The activity of ALGISIUM C® at the connective tissue level is its main advantage and an opportunity to decrease the speed of appearance of the signs of premature aging on the skin.

ORGANIC SILICON - ACTION

- SKIN REPAIR – Prevention and restructuring
- PROMOTES THE FIRMNESS AND ELASTICITY OF THE SKIN – Stimulates the production of collagen
- LIPOLYSIS – Reduction of body centimeters
- SOFTENING AND SOOTHING – Anti-free radicals and control of the inflammatory response
- ANTI-STRETCHES – Deep hydration and optimization of the quality of collagen
- FACIAL AND BODY MOISTURIZER – With a more lasting and intense effect

IN VITRO STUDIES

Evaluation of the potential of Silicon in fibroblastic cyto stimulation

After incubation with different concentrations of ALGISIUM C®, "aged" fibroblasts (Fetal Calf Serum, STF 2%) have shown proliferative activity.

Evaluation of the potential of Silicon on the production of collagen

ALGISIUM C® induced increased collagen production in "aged" fibroblasts (STF 2%).

ALGISIUM C® induces cellular regeneration and optimizes the synthesis of structural elements such as collagen.

ANTI-AGING AND ANTI-STRETCH MARKS

Clinical evaluation of skin with premature aging after treatment

ALGISIUM C® improves all the signs of aging, until the loss of glow or shine of the skin caused by the passage of time. These overall enhancements help overall body care and can be very effective in preventing stretch marks.

ANTI-WRINKLES

Clinical evaluation of the potential of ALGISIUM C® for the treatment of wrinkles

ALGISIUM C® has impressive filling activity in the deep wrinkle. ALGISIUM C® protects the structural tissue of the skin (extracellular matrix and its components: elastin, collagen ...), which explains its preventive activity in skin aging.

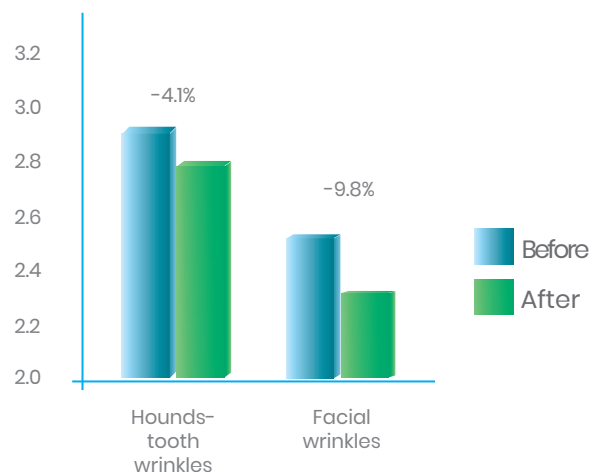

Before

After

Wrinkle attenuation

MATRIXYL® 3000

The term "matrikines" was considered to designate peptides released by the partial proteolysis of extracellular matrix macromolecules, which are capable of regulating cellular activities. They are fragments whose sequence is generally less than or equal to 20 amino acids.

Two Palmitoyl-GHK and Palmitoyl GQPR peptides have been selected which have already been extensively studied and documented in in vitro and in vivo studies and have shown very interesting synergistic properties in a new series of in vitro studies using fibronectin and hyaluronic acid.

ACTION

- **SKIN REPAIR** – Prevention and restructuring
- **PROMOTES SKIN FIRMNESS AND ELASTICITY** – Stimulates the production of collagen
- **ANTI-WRINKLES** – Decreased expression lines

IN VITRO STUDIES

- **Study of the new synthesis of the matrix by fibroblasts**

COLLAGEN + 258%
FIBRONECTIN + 164%
HYALURONIC ACID.... + 179%
